

Watertight Pipe Relining

Cure-in-Place Pipe Relining at
a Heritage Site

We all know that a heritage site is something not to be touched with a chisel and hammer. So what do you do when you have a continual problem with the sewer line that blocks due to root infiltration and the line runs underneath the building? You call the professionals, *Watertight Pipe Relining*. When the owners of a building in Johannesburg declared a heritage site had a dreaded problem *Watertight* examined the extend of the problem and provided a solution with their unique structural epoxy lining which repaired the existing line without digging or chopping any part of the structure. A result of experience, dedication and all round professionalism.

“That is what is always expected of *Watertight Leak Detection and Pipe Relining* and we don’t fail to do our best every time!”
